1. Read through the content.pdf document.
   a. The content.pdf has all of the text that you can copy and paste into your website b. The text is separated by section (which should help you with navigation aka navbar links scrolling to the appropriate section)
2. The work section - the one with the 8 product pictures - should have a pseudo-class attached to each image so when you hover, the dark top with the eyeball icon will fade on above it.

3. Use Bootstrap's grid system, and keep your code organized for your own sanity!!!
   a. Use comments throughout your HTML to help you organize your code
4. Upload your code to GitHub
   a. If you are using codesandbox, download your files as a zip folder > extract all files > upload the extracted files (this is how we avoid the corrupted image files)

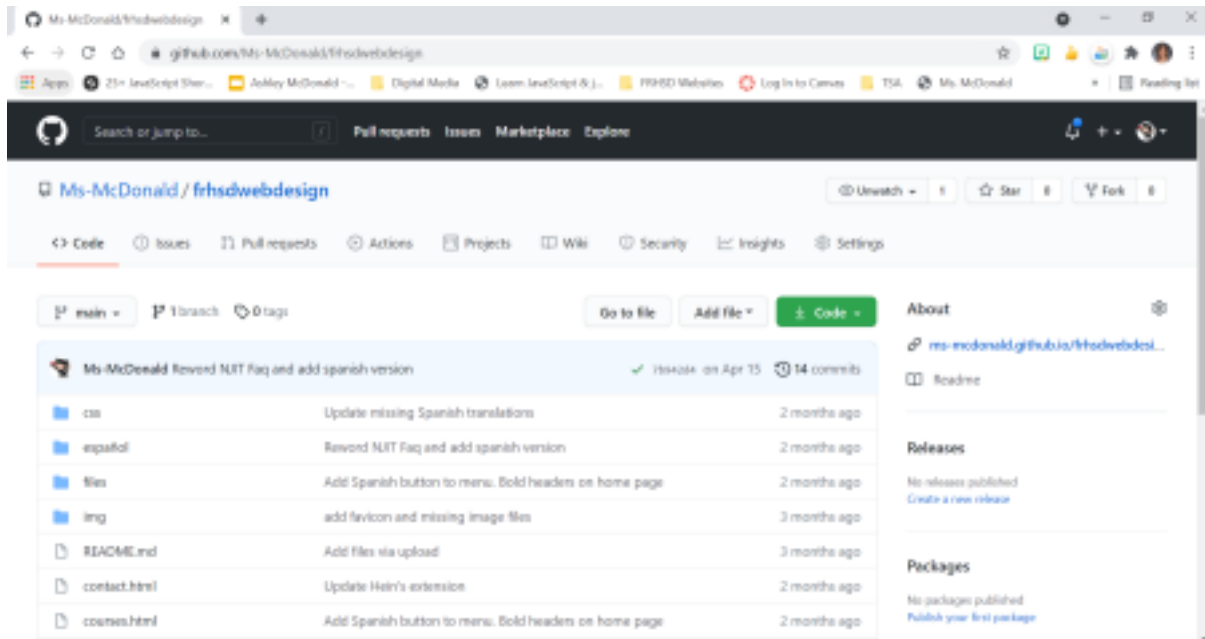

5. Copy and paste the **GitHub Pages** link into this Google Classroom assignment and submit.
   a. Scroll down to get help with this part.

How to get the GitHub Pages link

Create a repository and upload your files. ***make sure index.html is on the root of the repo***

Select **SETTINGS**

In settings, on the left menu bar select **PAGES**

How to get the GitHub Pages link

In pages,

1. Make sure your **source** is set to the **main branch**

2. After the page reloads, **right-click** on the link provided and **Copy Link Address**
